Java + Spring Boot + Maven Open-Source Projects

9 projects selected for your October 2026 open-source contribution goal

Your current stack

Java • Spring Boot • Maven • Apache ecosystem

Recommended priority

Week	Recommended projects
Week 1	Apache Maven Surefire → Apache Maven Plugin Tools → Apache Maven
Week 2	Spring Boot → Spring Framework
Week 3	Apache StormCrawler → Apache IoTDB → Apache Gravitino
Week 4	Apache SeaTunnel + return to Spring/Maven projects

Project list

#	Project	Technology	Fit	Why it is useful
1	Apache Maven	Java, Maven	■■■■■	Open issues including Maven 4, bugs, documentation and help-wanted task
2	Apache Maven Surefire	Java, Maven	■■■■■	Beginner-friendly issues; useful for learning Maven plugins, tests and build t
3	Apache Maven Plugin Tools	Java, Maven	■■■■■	Open issues around Maven plugin tooling and descriptor/API compatibility.
4	Spring Boot	Java, Spring Boot	■■■■■	Beginner-friendly issues plus excellent relevance for a Java/Spring Boot car
5	Spring Framework	Java, Spring	■■■■■	Active project with beginner-friendly issues and strong Java/Spring relevanc
6	Apache StormCrawler	Java, Maven	■■■■	Good-first-issue opportunities including Maven compatibility and bug fixes.
7	Apache IoTDB	Java, Maven	■■■■	Multiple good-first-issue opportunities and Java bug/function work.
8	Apache Gravitino	Java, Apache ecosystem	■■■■	Good First Issues covering tests, metadata and authorization-related work.
9	Apache SeaTunnel	Java, Apache ecosystem	■■■■	Large project with good-first-issue, help-wanted and first-time-contributor iss

How to use this list

1. Apache Maven — Start here because Maven is already part of your skill set. Look for good-first-issue, help-wanted, documentation and Maven 4 issues.

2. Apache Maven Surefire — A strong first contribution target. Maven plugin work can help you understand build lifecycles, tests and plugin configuration.

3. Apache Maven Plugin Tools — Good for learning how Maven plugins work and for practicing Java fixes around plugin tooling.

4. Spring Boot — One of the highest-value projects for your Java Developer goal. Start with smaller issues before attempting complex framework changes.

5. Spring Framework — A strong long-term target for understanding Spring internals and contributing to the ecosystem.

6. Apache StormCrawler — Useful Apache project with Java/Maven work and good-first-issue opportunities.

7. Apache IoTDB — A larger Java project with good-first-issue opportunities involving functions, tests and bug fixes.

8. Apache Gravitino — Apache project with Good First Issues around tests, metadata and authorization.

9. Apache SeaTunnel — Large Apache project with first-time-contributor and good-first-issue opportunities.

Contribution strategy

Prioritize meaningful contributions: bug fixes, tests, documentation, Javadocs, Maven/build fixes, examples and small improvements. For your resume, a smaller number of meaningful merged PRs is more valuable than a large number of trivial changes.

Important: issue availability changes frequently. Before starting an issue, check that it is still open, that the repository is accepting contributions, and that no one has already claimed the work.
